Focus on Europe.

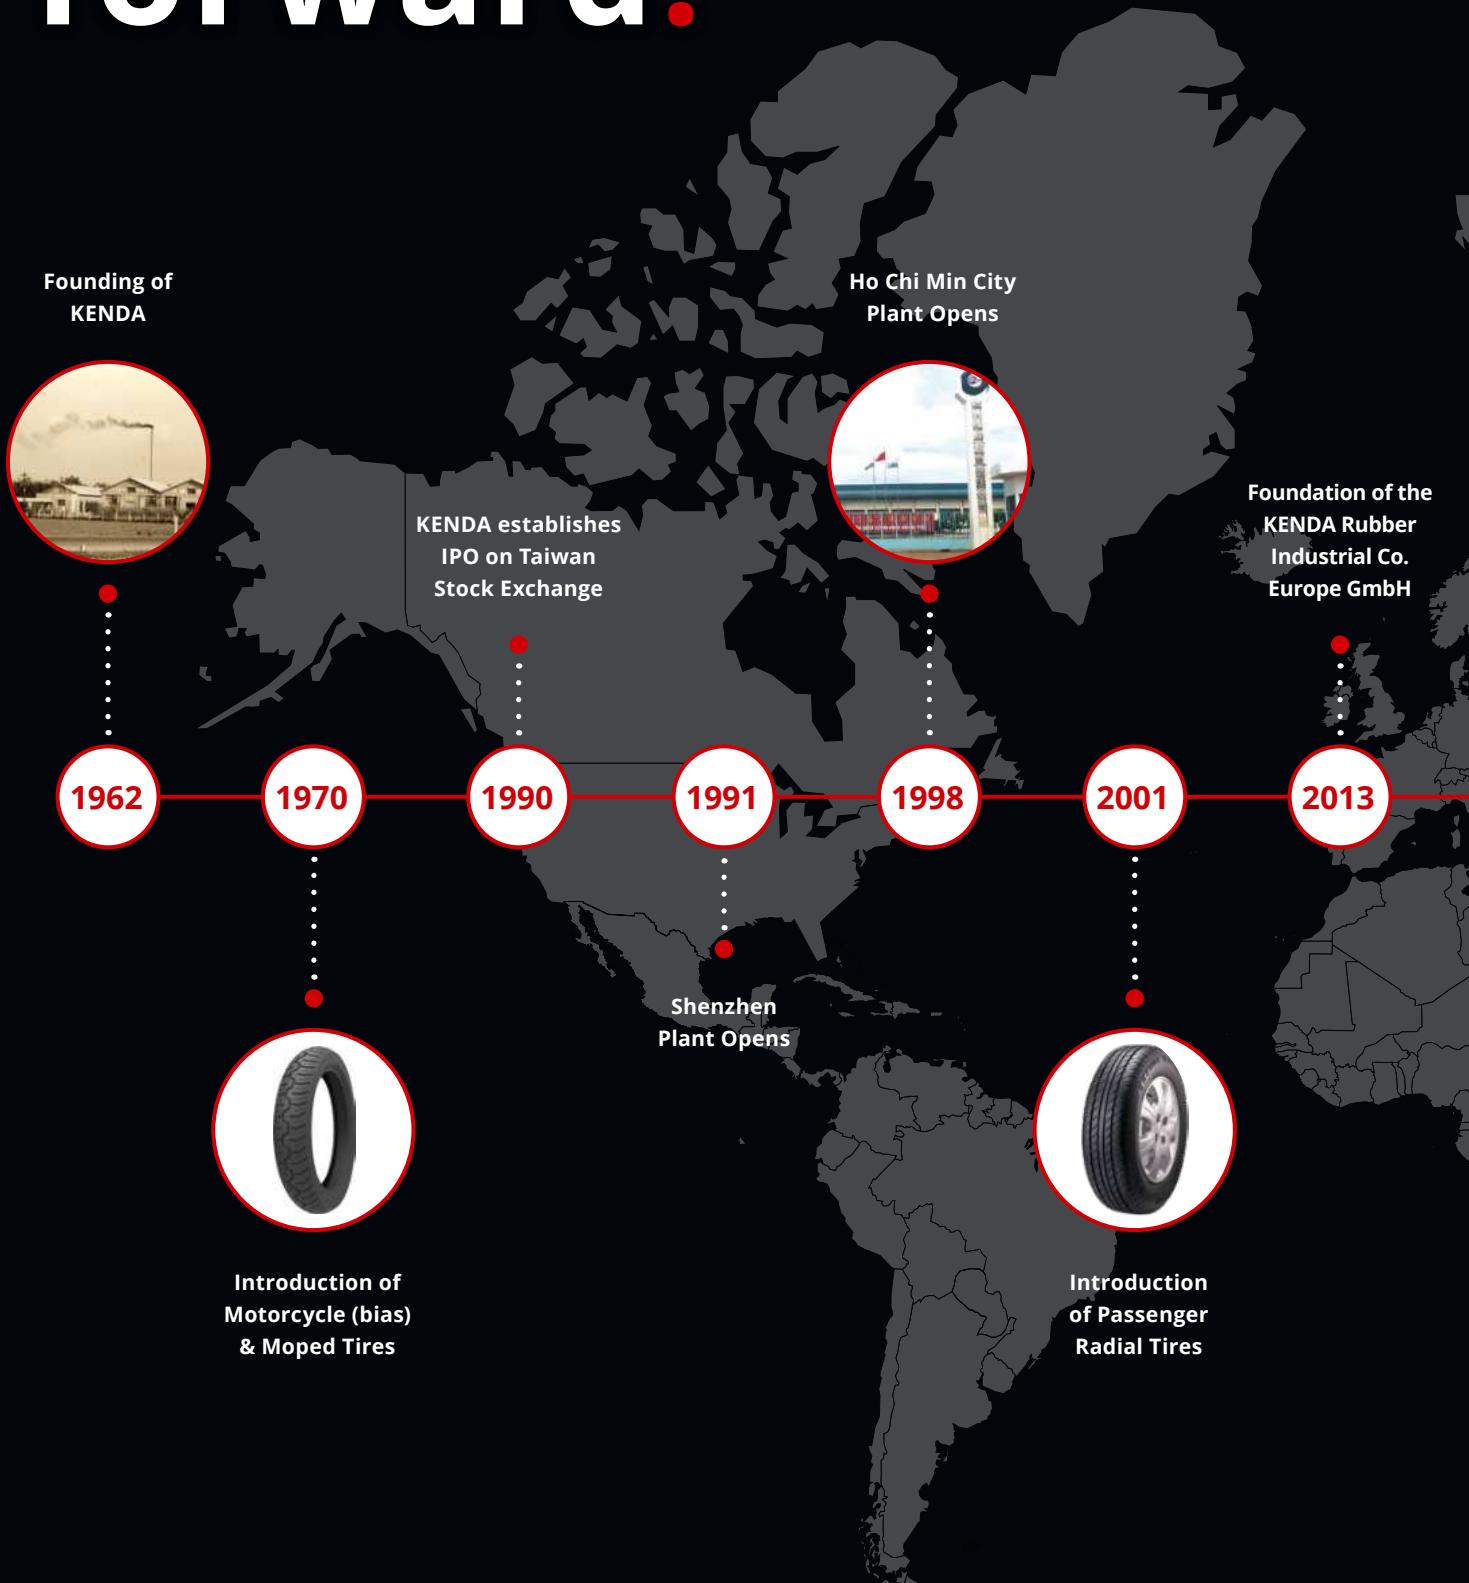

"At KENDA Tires, our vision is to be the foremost provider of cutting-edge tire solutions, setting new industry standards for performance, safety, and innovation. We aspire to create a future where our tires are not just a part of vehicles but integral to an enhanced driving experience. For over 60 years, KENDA continues striving for excellence. We envision KENDA as a global leader in sustainable tire manufacturing, continuously pushing boundaries to develop eco-friendly and technologically advanced products. Since Mr. Chin-Pao Yang started the company in 1962, our vision continues to extend beyond the rubber and treads, encompassing a commitment to fostering a safer, more connected, and sustainable world of mobility. Through tireless innovation, environmental responsibility, and a dedication to customer satisfaction, we aim to redefine the road ahead and leave an enduring imprint on the tire industry."

Jimmy Yang, Chairman of KENDA Tire Global

Product Descriptions.

dry handling

wet handling

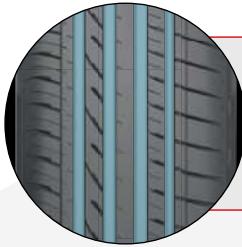

dynamic driving

UHP KR41 | EMERA A1

The asymmetrical tread design of KENDA's KR41 EMERA A1 provides this ultra high performance summer tire with excellent handling and cornering ability. The design with four wide circumferential grooves and progressive siping with an advanced compound enhances driving stability, braking, wet grip and superior water evacuation.

4 LONGITUDINAL GROOVES

together with a high silica-based tread compound improve the aquaplaning and wet handling performance making the tire safe on wet roads.

STIFF OUTSIDE BLOCKS

with wide tie-bars improve cornering performance and steering sensitivity.

A DOUBLE SOLID CENTER RIB

further improves steering feel and reduces noise, giving a secure and comfortable ride.

A LONGITUDINAL GROOVE IN THE DOUBLE CENTER RIB

improves lateral grip while cornering on dry and wet surfaces.

= available in Europe

 dry handling

 wet handling

 low noise

 high stability

KR210 | KENETICA PRO

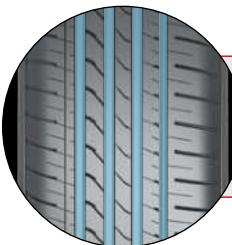

The KR210 KENETICA PRO is KENDA's new HP tire for small and compact class passenger cars – a perfect complement to KR41 EMERA A1 UHP pattern made in Taiwan. The asymmetrical design of KENETICA PRO provides high stability, improved steering response and optimized wet capabilities. Four longitudinal grooves ensure an upgraded aquaplaning performance and excellent water drainage. Covering rim diameters from 13 to 16 inch and speed categories from T to W – it is the perfect enhancement to complete the KENDA summer tire range.

THE ASYMMETRIC NOT DIRECTIONAL PATTERN DESIGN WITH 4 LONGITUDINAL GROOVES FOR WIDER AND 3 FOR NARROWER SIZES OFFERS SOME SPECIAL ADVANTAGES.

UNIFORM STIFFNESS

between different pattern blocks in order to guarantee even wear and long-lasting performance.

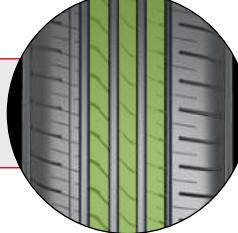

LONGITUDINAL GROOVES

optimized in terms of number, accordingly to tread width, in order to improve both water drainage and noise emission.

CENTER BLOCKS

designed to improve wet traction and steering precision.

INSIDE AND OUTSIDE SHOULDER BLOCKS

designed for providing a maximum of grip and cornering stability on dry and wet surfaces.

 mileage

 low noise

KR203 | KENETICA ECO

The KR203 KENETICA ECO is KENDA's standard high performance tire with rim diameters from 13 to 18 inch and is available in speed categories from T to V. The KR203 KENETICA is the successor of the KR23 KOMET PLUS, which has phased out. The asymmetrical design of the KR203 KENETICA ECO offers excellent handling, durability and a quiet, comfortable ride. The four circumferential grooves provide superb water evacuation and a great aquaplaning performance.

-  dry handling
-  mileage
-  low noise

KR32 | KUAVELA SL

The KR32 KUAVELA SL is KENDA's high performance comfort tire offering with a range of 14 to 18 inch sizes and H, V and W rated tires. The Five-pitch tread sequences designed with KENDA NMA technology effectively reduces pattern noise. Wide shoulder sipes and circumferential grooves displace water effectively.

-  competition
-  dry handling
-  dynamic driving

KR20A | VEZDA UHP | VEZDA UHP MAX

The VEZDA UHP KR20A and the VEZDA UHP MAX KR20A are KENDA's ultimate competition tires designed for premium performance at a value price. Both tires compete and win in race competitions and provide 200TW AA A and 300TW A A that are hitting podiums in Formula Drift and the World Racing League endurance series. These tires are designed to deliver the highest combination of dry and wet traction along with reasonable ride and treadwear. They offer popular sizing from 15 to 19 inch wheel diameters and performance benefits whether you are a professional, drift enthusiast or looking for weekend excitement.

- wet handling
- high stability
- low noise
- mileage

KR606 | KENETICA SUV

NEW

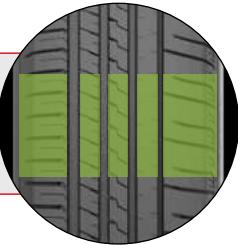

Meet the KR606 KENETICA SUV – KENDA's latest summer tire crafted for compact and mid-size SUVs. A unique silica compound and extra-wide channel grooves ensure optimised wet performance, while the 3D-chamfered design on the outer shoulder enhances braking contact for maximum safety in all driving conditions. Engineered for low rolling resistance, high comfort and precise steering performance, the KENETICA SUV covers rim sizes from 16 to 19 inches and speed ratings from H to W.

EXTRA WIDE CHANNEL GROOVES
help to disperse water in order to create a predictable ride.

THE OUTSIDE SHOULDER
is designed with a 3D-chamfered design, which increases the tire's contact area when braking and effectively improves safety in all conditions.

OPTIMISED HORIZONTAL SIBE
distribution and multi-pitch arrangement design reduces tread wear and noise.

STRAIGHT GROOVE EDGE CHAMFERING DESIGN
improves stability during cornering and reduces uneven wear.

- dry handling
- dynamic driving
- mileage

KR605 | EMERA SUV

The KR605 EMERA SUV is one of the successors of the well proven KR50 Klever H/T. The new generation of asymmetric pattern design provides an improved rolling resistance and supports the energy saving without sacrificing the high grip performance.

-  mileage
-  rough terrain & rock climbing
-  high stability and traction

KR601 | KLEVER R/T

The terrain you drive on does not care and it is not willing to compromise – It is what it is! The KENDA Klever R/T was designed to conquer Rough Terrain without sacrificing the ride and comfort of an A/T tire. Combining our Triple Threat 3-Ply sidewall for exceptional durability with aggressive styling. An optimized tread design with a superior all-weather compound makes the Klever R/T the right solution for 4x4 owners on the road or in any off-road environment.

-  dry handling
-  wet handling
-  mileage
-  low noise

KR33/KR33A | KOMENDO

The KR33 and KR33A KOMENDO are KENDA's commercial van tires for all popular vehicles in this category. The products are available in a full range of 51 types from 12 to 16 inch and series 80 to 60. KENDA's international Engineering Team has developed this tire and adapted it to the specific demands of the European markets. The KR33 and KR33A KOMENDO provides excellent well balanced performance characteristics both laden and unladen including braking and handling on wet and dry roads, combined with high stability.

 = available in Europe

low noise

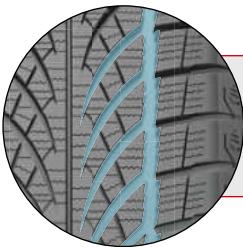

snow handling

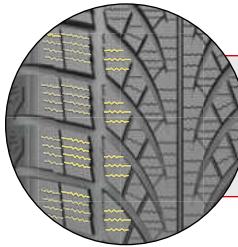

KR501 | WINTERGEN 2

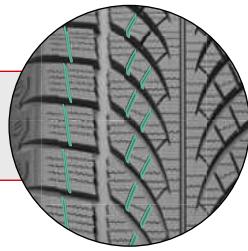

The Winter terrain tread pattern of KENDA's KR501 WINTERGEN 2 is designed to offer a safe and comfortable driving experience in winter conditions. Hundreds of zigzag sipes coupled with an enhanced chemical rubber compound to create confident driving, V-shaped drainage grooves provide outstanding traction in extreme conditions. Reliable grip in icy and snowy conditions.

**V-SHAPED WATER FLOW CHANNELS**

improve the aquaplaning and wet handling performance, ensuring a secure ride on wet roads.

**3D-SIPES**

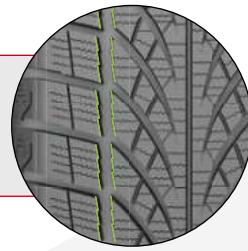

increase the grip on snowy roads without compromising dry handling and braking.

**HIGH LATERAL EDGE DENSITY**

improves the lateral grip, ensuring secure handling on snowy roads.

JAGGED EDGES IN THE MAIN GROOVES

create shear forces in the snow which increases grip in both braking and accelerating directions.

-  wet handling
-  dynamic driving
-  low noise
-  snow handling

KR504 | WINTERGEN 2 SUV

KR501 WINTERGEN 2 SUV, the new SUV Winter pattern developed by European engineers is especially designed for continental European winter conditions. The directional tread pattern provides an optimized wet grip and offers exemplary traction on snow and ice. The extension to the WINTERGEN 2 – the KENDA passenger car pattern, offers impressive handling capabilities with a smooth and comfortable ride on all surfaces. Its newly designed snow grooves guarantee superb snow traction, whereas the four lateral grooves maximize the water evacuation. The range of the WINTERGEN 2 SUV covers the diameters from 15 to 20 inch and is available in speed categories T to V.

-  wet handling
-  mileage
-  snow handling

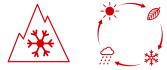

KR500 | KOMENDO WINTER

The winter terrain tread pattern of KENDA's KR500 KOMENDO WINTER is designed to offer a safe and comfortable driving experience in winter conditions. Extra wide channel grooves help to clear water and snow, providing confidence for winter driving.

 = available in Europe

ECE R90

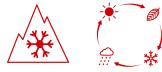

KR202 | KENETICA 4S

KENDA's KENETICA 4S combines the qualities of a high-performance summer tire with the safety requirements of a modern winter tire. The directional profile with water drainage grooves and the stiff siped tread blocks offer year-round safety. This means no compromises in winter, because the KENETICA 4S is particularly convincing with its short braking distances and high traction on snow. Also on ice it offers the best possible safety. Short braking distances and safe handling on dry and wet roads make the KENETICA 4S a firstclass all-rounder.

K All Season. SUV & 4x4

- high stability and traction
- durability
- rough terrain & rock climbing

EU
ECE R90

KR615 | KLEVER A/T 4S

NEW

Introducing the KR615 KLEVER A/T 4S – KENDA's all-season and all-terrain tire for 4x4 vehicles. Conquer any terrain in any season with a special silica compound crafted to ensure a perfectly balanced dry, snow, and off-road performance. The unique all-terrain tread pattern minimises noise and maximises grip by efficiently trapping mud and snow. Covering rim diameters from 15 to 17 inches and speed ratings from S to H, this tire offers high comfort, excellent wear performance and an optimised footprint for confident handling under diverse loads.

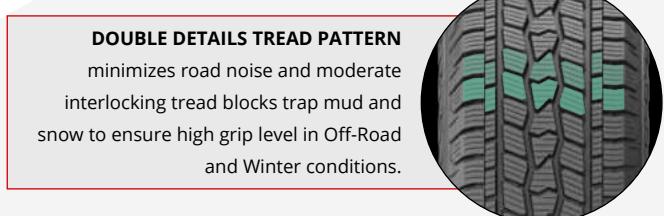

FOUR LARGE CIRCUMFERENTIAL GROOVES

provide superior hydroplaning capabilities and wet traction performance supporting Snow grip as well by trapping snow.

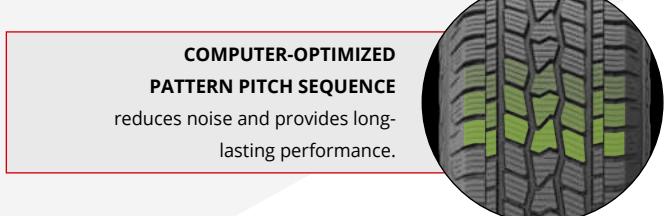

PATTERN SIBE DENSITY

maximized to optimise performance in severe winter conditions and on Off-Road surfaces by adding additional edges biting the ground.

DOUBLE DETAILS TREAD PATTERN

minimizes road noise and moderate interlocking tread blocks trap mud and snow to ensure high grip level in Off-Road and Winter conditions.

COMPUTER-OPTIMIZED PATTERN PITCH SEQUENCE

reduces noise and provides long-lasting performance.

- dry handling
- wet handling
- low noise
- snow handling

KR609 | KENETICA 4S SUV

KENDA's KENETICA 4S SUV combines the qualities of a high-performance summer tire with the safety requirements of a modern winter tire. The innovative tread pattern with its smooth lateral grooves ensures excellent behaviour on wet roads, while at the same time additional edges provide the best snow compaction and thus an outstanding performance on Snow and Ice. Finally, the optimised block shape guarantees dry handling performance competitive with premium brands. Thanks to weight reduction, rolling resistance and comfort have been further improved. In short, KENDA's KENETICA 4S SUV is a first-class all-arounder.

- mileage
- wet handling
- dry handling
- durability

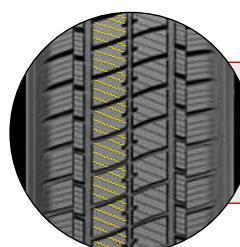

KR105 | KOMENDO 4S NEW

Meet the KR105 KOMENDO 4S – KENDA's all-season tire completing our commercial van tire range. Specifically engineered for the demands of the European market, the KR105 provides you full control in your daily challenges. The special silica all-season compound ensures balanced stiffness and maximum grip in both wet and dry conditions. The KR105 covers rim diameters from 15 to 17 inches and speed categories from N to H with an impressively high mileage. Let nothing slow you down with this reliable and comfortable C-tire all-rounder.

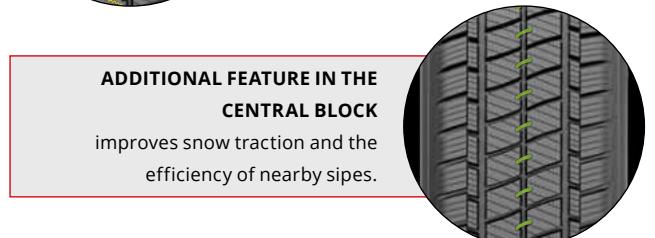

3 SEE-THROUGH LONGITUDINAL GROOVES
improves water drainage maximizing overall Wet performances and Handling on Snow surfaces.

ZIG-ZAG 3D SIPES
for enhanced snow traction capabilities with considerable interlocking for wet and dry braking.

SHIFTED SLOT IN THE SHOULDER AREA
reduces noise and enhances lateral snow performance. Its design allows to rebalance the block stiffness enhancing the wear performance.

ADDITIONAL FEATURE IN THE CENTRAL BLOCK
improves snow traction and the efficiency of nearby sipes.

Summer Passenger Car.

S.W. = Section Width O.D. = Overall Diameter UTQG = Uniform tire quality grading

Technical information may be subject to change. Errors excepted.

EU Tire Regulation

REGULATION (EU) No 2020/740 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL requires that all tires* produced from 1st May 2021 and on sale in the EU will be accompanied by a new label to be displayed at the point of sale.

An example of the new EU Tire Label can be seen to the left. This is similar to labelling already in wide use for household goods such as washing machines and dishwashers.

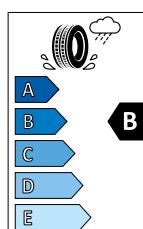

The new tire label that replaces the standardized tire label that had been introduced by the European Union in 2012, provides information on 3 specific tire performances: wet grip performance, fuel efficiency, and exterior rolling noise.

Tires are characterised by a number of parameters which are interrelated. The new label also adds snow and ice pictograms where appropriate. Improving one parameter such as rolling resistance may have an adverse impact on other parameters such as wet grip, while improving wet grip may have an adverse impact on external rolling noise.

* Scope includes tires for cars, light commercial vehicles and heavy trucks.

Fuel Efficiency

One of the forces influencing the fuel efficiency of a motorized vehicle is the Rolling Resistance of the tires. This phenomenon exists because a tire deforms when rotating, resulting in energy losses in the form of heat. The higher the deformation, the higher the tire rolling resistance, and consequently the more fuel required to move the vehicle forward. In other words, lower rolling resistance means lower fuel consumption and therefore lower vehicle emissions, including CO₂.

Wet Grip

The most important role of a tire is to provide safety – in all conditions. Wet adherence or grip is one of the most important performance characteristics. However, higher adherence and lower rolling resistance are often contradictory objectives that have traditionally required a performance trade-off. Thanks to the new labelling regulation, customers will be able to see and choose for themselves their preferred performances. The label will display a range of 5 grades where tires with an A provide the highest levels of wet grip and E the lowest.

Exterior Noise

Traffic noise is a relevant environmental issue, determined by:

- Traffic intensity and vehicle types
- Driving style
- Tire-Road interaction

Exterior noise levels are displayed on the label in 3 grades from A to C and also in decibel (dB).

Actual fuel savings and road safety depend heavily on the behaviour of drivers, and in particular the following:

- eco-driving can significantly reduce fuel consumption.
- tire pressure should be regularly checked to optimize wet grip and fuel efficiency performance.

The new label will display 5 different grades of Rolling Resistance where A is the most fuel efficient and E the worst in class. The black arrow (in this case A) next to the grading indicates the performance level of the product.

Snow Pictogram

The new tire label includes a snow pictogram commonly known as the “three peak mountain snow flake symbol” that also appears on modern winter tires. This pictogram will be displayed on labels of tires meant for use in severe snow conditions. A minimum level of snow performance has to be reached to be able to display this symbol.

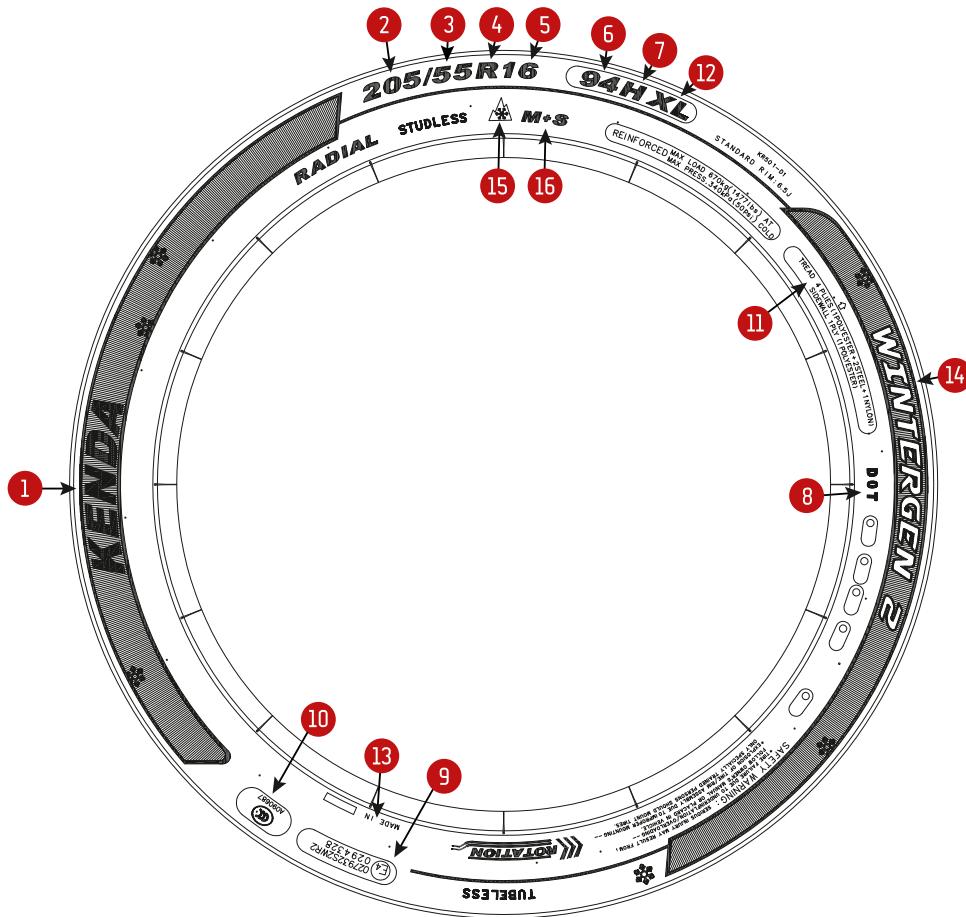

Ice Pictogram

The new tire label includes an ice pictogram. This pictogram will be displayed on labels of tires that have objectively reached a minimum level of performance in ice surfaces.

More information about the tire labelling regulations as well as a list of FAQs is available from the European Tyre & Rubber Manufacturers' Association (ETRMA). www.etrma.org

Technical information

1. Brand

2. Tire Width

3-digit number that gives the approximate tire width in mm. It measures from sidewall to sidewall. Typically, the higher the number the wider the tire.

3. Aspect Ratio

2-digit number that gives the approximate sidewall height. It is expressed as a % of the tire width. The lower the ratio, the smaller the sidewall height.

4. Construction

R = Radial Ply

Radial tires are the industry standard and refers to the internal plies being 90 degrees to the direction of travel

5. Wheel Diameter

2-digit number (in inches) that indicates the tire is designed to fit on a wheel with a 16-inch diameter.

6. Load Index

2-digit number that indicates how much weight the tire is certified to carry at maximum safe inflation.

7. Speed Rating

1 letter which indicates the top speed at which a tire is certified under specified conditions.

8. DOT Codes

This assures that your tire complies with all Department of Transportation (DOT) safety standards. The next two numbers or letters are the plant code where it was manufactured. The last four numbers represent the week and year the tire was built. For example, the numbers 2212 mean the 22nd week of 2012. The other numbers in the middle are used at the manufacturer's discretion as a code. This information is used to contact consumers if a tire defect requires a recall.

9. ECE Approval Number

An E with a number in a circle assigned by the Economic Commission for Europe, that declares the tire meets the minimum safety requirements of all directives applicable in the EU.

10. CCC Mark

11. Structure Details

12. Extra Load

XL is the marking for an extra reinforced tire in order to expand the load capacity.

13. Country of Origin

14. Pattern Name

15. 3PMSF

The three peak mountain snow flake symbol proves the minimum required performance in winter conditions, the so called snow grip index under the EU regulation 661/2009.

16. M+S

It marks the tire with the feature of having a good traction on Mud and Snow, but it does not qualify the product as a winter tire.

Tire Description. 3PMSF and M+S Markings

3PMSF Marking

Tires developed to provide proper performance also in winter conditions allow better grip on snow, reduce fuel consumption and provide excellent traction, due to a specially designed tread. They decrease the braking distance and guarantee better driving conditions, increasing safety.

From November 2012, UNECE Regulation 117, to be implemented in the EU through Regulation (EC) 661/2009, requires that for tires to be used in winter conditions a minimum level of performance on snow (braking and traction) needs to be achieved. If the tire meets the criteria of an ad hoc performance test, it can be marked with the new three-peak mountain snowflake (3PMSF) symbol as an additional but not mandatory marking. The "M+S" marking, however, will remain as an allowed marking, even if not linked by law to a minimum threshold in winter conditions.

M+S Marking

M+S stands for "Mud + Snow". It is a declaration that the tire operates in mud and snow better than regular models. The marking is also shown on winter tires but not all tires with "M+S" have winter properties. "M+S" letters are also on some all-season tires. The marking is additionally used on models sold in the US market, even though they do not meet the needs of drivers in the winter season.

In general, "M+S" tires should have very soft rubber compound and a tread with more incisions to ensure better performance in the snow. Unfortunately, these features are not verified by standardised tests and may be unreliable.
